

INPUT

return all numbers in array
divisible by divisor

FUNCTION

OUTPUT

divisor 2
12345
= 2,4

1. //function statement named divisibleBy
with param numbers, divisors

2. //variable h = [] empty array

3. //for loop let i equal 0; i less
numbers.length; i++

4. //if numbers i index divided by divisor == 0
remainder

5. //h property with push method numbers at i
index param

6. // return h
